The Rwanda population is projected to increase from 13.2 million in 2022 to 24.2 million (high scenario), to 23.8 million (medium scenario), and to or 23.4 million (low scenario) by 2052.

The absolute difference between the assumption scenarios is trivial, which suggests that the future size of Rwandan population would be approximately 80% more than the current population.

A direct consequence of this evolution is the unprecedented increase in the population density, as high as 903 inhabitants per square kilometer according to the medium scenario in 2052.

Population size (Inhabitants) **Projection Year** High Scenario Medium Scenario Low Scenario 2022 13,206,731 13,206,731 13,206,731 2023 13,499,656 13,498,611 13,499,134 2024 13,800,155 13,798,561 13,796,964 2025 14,108,214 14,104,965 14,101,706 2026 14,423,666 14,418,145 14,412,600 2027 14,746,250 14,737,803 14,729,313 2028 15,075,696 15,063,640 15,051,507

TABLE: Rwanda's population projection

2029	15,411,725	15,395,339	15,378,830
2030	15,754,101	15,732,629	15,710,973

The urban population will increase from 3.7 million in 2022 to 16.8 million (high scenario), 16.5 million (medium scenario) and 16.2 million (low scenario) by 2052. This corresponds to an overall increase equivalent to more than 4 times the increase rate of the total population.

The rural population will decline from 9.5 million in 2022 to 7.2 million (high scenario), 7.1 million (medium scenario) and 6.9 million (low scenario) by 2052.

This will translate in a decrease of the size of the rural population by 24.5% (high scenario), 26% (medium scenario) and 27% (low scenario) between 2022 and 2052 in consideration of the country's aspiration to have 70% of the population in urban by 2050.
